

Elucis NEXT

Elucis GO

本製品は薬機法未承認品です
治験、試験研究等の目的に転用する場合に限り販売いたします

In-headset | No desktop required

Untethered **immersive VR**. No workstation required.

The fully-immersive edition of Elucis – powerful 3D visualization delivered directly inside the headset, with no desktop connectivity required.

Immersive visualization without busy workstations.

Elucis Go is designed for pre-processed models – allowing clinicians to focus on visualization, interaction, and planning rather than data preparation. The result is a faster, more accessible entry point into immersive medical visualization, particularly for teams looking to enhance understanding and communication without integrating a full desktop workflow.

BEST FOR

Clinicians and consult teams who view, plan and discuss.

- Headset-first deployment.
- Pair Elucis Go with Elucis or Elucis Next on the desktop to prepare models.
- Take Elucis Go anywhere – consult room, OR, imaging department, or across the world.

With Elucis Go, clinicians can:

Access and interact with Elucis-built, patient-specific 3D anatomical models.

Review and refine understanding of complex cases.

Explore anatomy in an immersive VR environment – without a desktop.

Collaborate with colleagues globally in shared virtual environments.

Apply tools such as measurements and anatomical inclusions.

Engage directly with anatomical models in a natural, hands-on way.

Availability & regulatory scope. Elucis Next is intended for research and non-clinical use. It is the version of Elucis made available in markets where the cleared Elucis device is not yet registered. Elucis is an FDA 510(k)-cleared medical device.
